

# Website Developer

The Website Developer will play an important role in the Administrative Leads goals to attract attention and greater interest with students and potential stakeholders. The role of the website developer will largely demand maintenance of MIST's website. Such responsibilities include updating the website periodically on this year's project, team information, as well as additional information when need be. Highly motivated team players that are self-driven, resourceful, and can accomplish tasks both alone and within a group setting are an asset. Practical knowledge and experience using HTML and CSS are a prerequisite. Preference will be given towards applicants who have had prior experience using JavaScript.

## Role Description:

- Uploading onto the website important updates regarding project details, team memos and biographies.
- Responsibilities may evolve and shift to match what's needed as time progresses.

## Basic Skills:

- HTML and CSS knowledge.
- Experience with configuring layouts, elements, texts, and designing websites.

## Preferred Skills:

- Practical knowledge and experience using is JavaScript preferred.
